# Is power adjustable seat height right for your VA client?

The VA will consider funding a power wheelchair with the ability to change vertical position for ANY veteran if the technology meets the benefits for the client outlined in the second question below. Seat elevation may also result in improved functional independence, allowing the veteran to access surfaces that cannot be reached from a fixed seated position, but this is NOT the only criteria considered.

---

Check off each item below that the veteran would benefit from as a result of having a power wheelchair with the ability to change vertical position:

- Improve self-esteem
  - Improve social function
  - Enhance employment potential
  - Enhance communication
  - Improve quality of life
- 

If you checked off any of the benefits listed above, the veteran may benefit from power adjustable seat height on his or her power wheelchair.
